

Python Practical Programming Questions

Below is the compiled list of all the programming questions extracted from the provided document. The corresponding code solutions have been omitted as requested.

1. Write a Python program to print "Hello Python".
2. Write a Python program to do arithmetical operations addition and division.
3. Write a Python program to find the area of a triangle.
4. Write a Python program to swap two variables.
5. Write a Python program to generate a random number.
6. Write a Python program to convert kilometers to miles.
7. Write a Python program to convert Celsius to Fahrenheit.
8. Write a Python program to display calendar.
9. Write a Python program to solve quadratic equation.
10. Write a Python program to swap two variables without temp variable.
11. Write a Python Program to Check if a Number is Positive, Negative or Zero.
12. Write a Python Program to Check if a Number is Odd or Even.
13. Write a Python Program to Check Leap Year.
14. Write a Python Program to Check Prime Number.
15. Write a Python Program to Print all Prime Numbers in an Interval of 1-10.
16. Write a Python Program to Find the Factorial of a Number.
17. Write a Python Program to Display the multiplication Table.
18. Write a Python Program to Print the Fibonacci sequence.
19. Write a Python Program to Check Armstrong Number?
20. Write a Python Program to Find Armstrong Number in an Interval.
21. Write a Python Program to Find the Sum of Natural Numbers.
22. Write a Python Program to Find LCM.
23. Write a Python Program to Find HCF.
24. Write a Python Program to Convert Decimal to Binary, Octal and Hexadecimal.
25. Write a Python Program To Find ASCII value of a character.
26. Write a Python Program to Make a Simple Calculator with 4 basic mathematical operations.
27. Write a Python Program to Display Fibonacci Sequence Using Recursion.
28. Write a Python Program to Find Factorial of Number Using Recursion.
29. Write a Python Program to calculate your Body Mass Index.
30. Write a Python Program to calculate the natural logarithm of any number.
31. Write a Python Program for cube sum of first n natural numbers?
32. Write a Python Program to find sum of array.
33. Write a Python Program to find largest element in an array.
34. Write a Python Program for array rotation.
35. Write a Python Program to Split the array and add the first part to the end?
36. Write a Python Program to check if given array is Monotonic.
37. Write a Python Program to Add Two Matrices.
38. Write a Python Program to Multiply Two Matrices.
39. Write a Python Program to Transpose a Matrix.
40. Write a Python Program to Sort Words in Alphabetic Order.
41. Write a Python Program to Remove Punctuation From a String.
42. Write a Python program to check if the given number is a Disarium Number.
43. Write a Python program to print all disarium numbers between 1 to 100.

44. Write a Python program to check if the given number is Happy Number.
45. Write a Python program to print all happy numbers between 1 and 100.
46. Write a Python program to determine whether the given number is a Harshad Number.
47. Write a Python program to print all pronic numbers between 1 and 100.
48. Write a Python program to Multiply all numbers in the list.
49. Write a Python program to find smallest number in a list.
50. Write a Python program to find largest number in a list.
51. Write a Python program to find second largest number in a list.
52. Write a Python program to find N largest elements from a list.
53. Write a Python program to Remove empty List from List.
54. Write a Python program to Cloning or Copying a list.
55. Write a Python program to Count occurrences of an element in a list.
56. Write a Python program to find words which are greater than given length k.
57. Write a Python program for removing ith character from a string.
58. Write a Python program to split and join a string.
59. Write a Python program to check if a given string is binary string or not.
60. Write a Python program to find uncommon words from two Strings.
61. Write a Python program to find all duplicate characters in string.
62. Write a Python Program to check if a string contains any special character.
63. Write a Python program to Extract Unique dictionary values.
64. Write a Python program to find the sum of all items in a dictionary.
65. Write a Python program to convert key-values list to flat dictionary.
66. Write a Python program to insertion at the beginning in OrderedDict.
67. Write a Python program to check order of character in string using OrderedDict().
68. Write a Python program to sort Python Dictionaries by Key or Value.
69. Write a program that calculates and prints the value according to the given formula: $Q = \text{Square root of } (2CD)/H$.
70. Write a program which takes 2 digits, X,Y as input and generates a 2-dimensional array.
71. Write a program that accepts a comma separated sequence of words as input and prints the words in a comma-separated sequence after sorting them alphabetically.
72. Write a program that accepts a sequence of whitespace separated words as input and prints the words after removing all duplicate words and sorting them alphanumerically.
73. Write a program that accepts a sentence and calculate the number of letters and digits.
74. A website requires the users to input username and password to register. Write a program to check the validity of password input by users.
75. Define a class with a generator which can iterate the numbers, which are divisible by 7, between a given range 0 and n.
76. Write a program to compute the frequency of the words from the input.
77. Define a class Person and its two child classes: Male and Female. All classes have a method "getGender" which can print "Male" for Male class and "Female" for Female.
78. Please write a program to generate all sentences where subject is in ["I", "You"] and verb is in ["Play", "Love"] and the object is in ["Hockey", "Football"].
79. Please write a program to compress and decompress the string "hello world!hello world!hello world! hello world!".
80. Please write a binary search function which searches an item in a sorted list.
81. Please write a program using generator to print the numbers which can be divisible by 5 and 7 between 0 and n in comma separated form while n is input by console.
82. Please write a program using generator to print the even numbers between 0 and n in comma separated form while n is input by console.

83. Please write a program using list comprehension to print the Fibonacci Sequence in comma separated form with a given n input by console.
84. Assuming that we have some email addresses in the "username@companyname.com" format, please write program to print the user name of a given email address.
85. Define a class named Shape and its subclass Square. The Square class has an init function which takes a length as argument.
86. Write a function that stutters a word as if someone is struggling to read it.
87. Create a function that takes an angle in radians and returns the corresponding angle in degrees rounded to one decimal place.
88. In this challenge, establish if a given integer num is a Curzon number.
89. Given the side length x find the area of a hexagon.
90. Create a function that returns a base-2 (binary) representation of a base-10 (decimal) string number.
91. Create a function that takes three arguments a, b, c and returns the sum of the numbers that are evenly divided by c from the range a, b inclusive.
92. Create a function that returns True if a given inequality expression is correct and False otherwise.
93. Create a function that replaces all the vowels in a string with a specified character.
94. Write a function that calculates the factorial of a number recursively.
95. Create a function that computes the hamming distance between two strings.
96. Create a function that takes a list of non-negative integers and strings and return a new list without the strings.
97. The "Reverser" takes a string as input and returns that string in reverse order, with the opposite case.
98. Create variables first, middle and last from the given list using destructuring assignment.
99. Write a function that calculates the factorial of a number recursively.
100. Write a function that moves all elements of one type to the end of the list.
101. Create a function that takes a string and returns a string in which each character is repeated once.
102. Create a function that reverses a boolean value and returns the string "boolean expected" if another variable type is given.
103. Create a function that returns the thickness (in meters) of a piece of paper after folding it n number of times.
104. Create a function that takes a single string as argument and returns an ordered list containing the indices of all capital letters in the string.
105. Using list comprehensions, create a function that finds all even numbers from 1 to the given number.
106. Create a function that takes a list of strings and integers, and filters out the list so that it returns a list of integers only.
107. Given a list of numbers, create a function which returns the list but with each element's index in the list added to itself.
108. Create a function that takes the height and radius of a cone as arguments and returns the volume of the cone rounded to the nearest hundredth.
109. Write a function that gives the number of dots with its corresponding triangle number of the sequence.
110. Create a function that takes a list of numbers between 1 and 10 (excluding one number) and returns the missing number.
111. Write a function that takes a list and a number as arguments. Add the number to the end of the list, then remove the first element of the list.
112. Create the function that takes a list of dictionaries and returns the sum of people's budgets.
113. Create a function that takes a string and returns a string with its letters in alphabetical order.
114. Suppose that you invest \$10,000 for 10 years at an interest rate of 6% compounded monthly. Create a function that accepts the principal p, the term in years t, the interest rate r, and the number of compounding periods per year n.
115. Write a function that takes a list of elements and returns only the integers.

116. Create a function that takes three parameters where: x is the start of the range, y is the end of the range, and n is the divisor. Return an ordered list with numbers in the range that are divisible by n.
117. Create a function that takes in two lists and returns True if the second list follows the first list by one element, and False otherwise.
118. A group of friends have decided to start a secret society. Create a function that takes in a list of names and returns the name of the secret society.
119. An isogram is a word that has no duplicate letters. Create a function that takes a string and returns either True or False depending on whether or not it's an "isogram".
120. Create a function that takes a string and returns True or False, depending on whether the characters are in order or not.
121. Create a function that takes a number as an argument and returns True or False depending on whether the number is symmetrical or not.
122. Given a string of numbers separated by a comma and space, return the product of the numbers.
123. Create a function that squares every digit of a number.
124. Create a function that sorts a list and removes all duplicate items from it.
125. Create a function that returns the mean of all digits.
126. Create a function that takes an integer and returns a list from 1 to the given number (amplify numbers evenly divided by 4 by 10).
127. Create a function that takes a list of numbers and return the number that's unique.
128. Your task is to create a Circle constructor that creates a circle with a radius provided by an argument.
129. Create a function that takes a list of strings and return a list, sorted from shortest to longest.
130. Create a function that validates whether three given integers form a Pythagorean triplet.
131. Create a function that takes three integer arguments (a, b, c) and returns the amount of integers which are of equal value.
132. Write a function that converts a dictionary into a list of keys-values tuples.
133. Write a function that creates a dictionary with each (key, value) pair being the (lower case, upper case) versions of a letter, respectively.
134. Write a function, that replaces all vowels in a string with a specified vowel.
135. Create a function that takes a string as input and capitalizes a letter if its ASCII code is even and returns its lower case version if its ASCII code is odd.
